

7 Reasons Why

ValueOps ConnectALL is the best Value Stream Automation solution for your organization

01 | Decentralized Automation approach

Build and manage your own integrations, through ValueOps ConnectALL's self-service portal, while maintaining centralized control through security, administration, monitoring, and management. This saves time and cost, allowing you to take quick business decisions and enabling higher productivity.

Designed to break down barriers to continuous delivery | 02

Collaborate better with real-time synchronization and bi-directional flow of information, enabling you to eliminate the waste of manual entry across your value stream, and achieve end-to-end traceability and enhanced visibility.

03 | Deployment supports both on-premise and cloud

Cut down on operational costs as ValueOps ConnectALL eliminates the need for maintenance and system upgrades. ValueOps ConnectALL can automate implementation and integration so that you are free to choose the best and most cost-effective integration solutions for your business without fear of incompatibility.

Architected for faster time-to-value and rapid ROI | 04

Improve project completion rates and time-to-market, minimizing errors and reducing business risks with faster and more reliable integration between internal teams, customers, and suppliers.

05 | Easy to deploy and implement

Achieve faster roll-outs with minimal technical support; build simple to sophisticated integration with no coding required leading to seamless collaboration and flexible customization and scalability. Leverage advanced support services for session-based deployment, data mapping, and implementation.

Hybrid, interoperability across all environments | 06

Innovate faster than ever before, removing the obstacle of technology inconsistencies by bringing together your applications, processes, and data — whether on-premise or in the cloud. ValueOps ConnectALL supports any combination of on-premise and cloud endpoints for ALM and DevOps tools.

07 | Flexible pricing and simple licensing model

Power your business processes with integration plans that are suitable and affordable for small to large installations. It comes with a simple licensing model that allows you to add more applications as you move forward, and is priced per application server instance, with unlimited users and unlimited projects accessing the application service.
