ValueOps ConnectALL
ValueOps Insights

Elevate your software development and delivery processes with ValueOps ConnectALL and ValueOps Insights, the ultimate solution for streamlined collaboration and enhanced efficiency though comprehensive automation. With a single login, align business initiatives, accelerate time-to-market, and implement corrective actions swiftly.

Value Stream Automation Solution:

An enterprise-class solution that connects all of the tools within your software delivery value stream, with built-in vendor adapters, and a Universal Adapter for bi-directional or uni-directional data synchronization across the entire value stream.
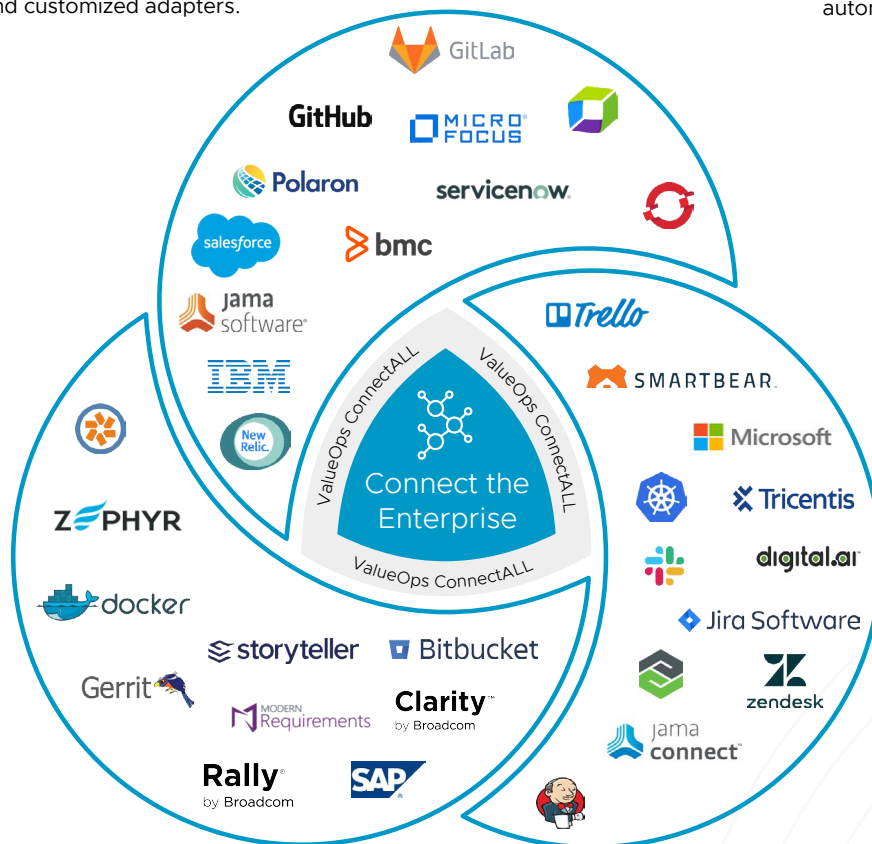

Value Stream Analytics:

A customizable, data and analytics-driven solution designed to accelerate delivery of business value. Comprised of the Insights Adapter, Insights Analytics, and Insights Services. Designed to help organizations get started with comprehensive insights into their value stream.

Integration with Third-party Tools

Enhance the constant stream of comunication between teams by connecting unlimited tolls across your software delivery value stream with pre-built and customized adapters.

Workflow Orchestration

Orchestrate actions, such as triggering build, running automated tests and application releases, and automating change approvals.

Lean Metrics Tracking and Analysis

Capture and visualize relevant, actionable data for metrics such as flow, lean DevOps, IT performance and more, allowing you to make better decision faster.

Enforce Governance and Security

Manage better governance by controlling synchronization of data according to specified criteria, decreasing security risks that could affect quality and reliability.

Improve Speed and Quality of Software Delivery with ValueOps ConnectALL

Gain end-to-end visibility into the health of your value stream to identify bottleneck, issues and constraints that impact business outcomes and block the delivery of value.

Align IT and Business Initiatives for Positive Outcomes

Enables alignment of business and IT initiatives to drive positive outcomes with real-time value stream and lean metrics, capturing critical sucesss factors, and end-to-end visibility of key metrics and outcomes across portfolios.

Remove Waste and Reduce Overhead with Actionable and Relevant Data

Measures the activities and outcomes of product value streams to drive continuous improvement efforts with real-time flow of data, identifying bottleneck impacting the efficient flow, and proving a "What If" analysis.

Increse Productivity and Reduce Costs with Data-driven and Outcome-focused Analytics

Provides real-time, data-driven and outcome-focused analitycs by automatically capturing data for metrics; uncovering product issues and risks; aiding decision makers with cost reduction, competitive positioning, and product fit in the marketplace; and calculating value stream and lean metrics.

Stay Ahead of Competition with Value Stream Visualization

Provides dynamic visualization of each product value stream and how they interact with one another with end-to-end visibility of every work item, how they evolve, and their relationships with other work items in and across product value streams; the speed and quality of their evolution to customers; and visualization of how the current value stream evolved over time.

Improve Build Time and Quality with Workflow Orchestration

Helps orchestrate and coordinate automatic triggers like builds, automated tests, and deployments, with centralized control of builds, CI/ CD tests, and releases/ deployments Manages scheduling and integration of automated actions and tasks across disparate systems within the value stream, and optimize frequently occurring processes and workflows, helping teams to deploy applications more efficiently.

Achieve Traceability with IT Governance:

Aids in the process of governing IT capabilities by supporting frameworks like ITIL, CMMI, or TQM, with centralized governance over the flow of work across an entire product value stream. Enables management of information security work streams and incidents (by combining frameworks like COBIT and COSO, and ISO 27001).

ValueOps ConnectALL and ValueOps Insights stand as transformative Value Stream Automation Solutions, enriching your software development and delivery processes. By seamlessly integrating with your existing tools and platforms, they amplify visibility, alignment, and efficiency across your value stream. With their comprehensive automation capabilities, **ValueOps ConnectALL** streamlines workflows, synchronizes data, and fosters seamless collaboration, ensuring optimal performance throughout the software delivery lifecycle, while **Valueops Insights** enhances decision-making by eliminating data silos and gaining access to important metrics, measuring what matters most to stakeholders, and aligning business and delivery by monitoring value streams every step of the way.
